HITCTF2024 Description of Competition Rules

1. Question types

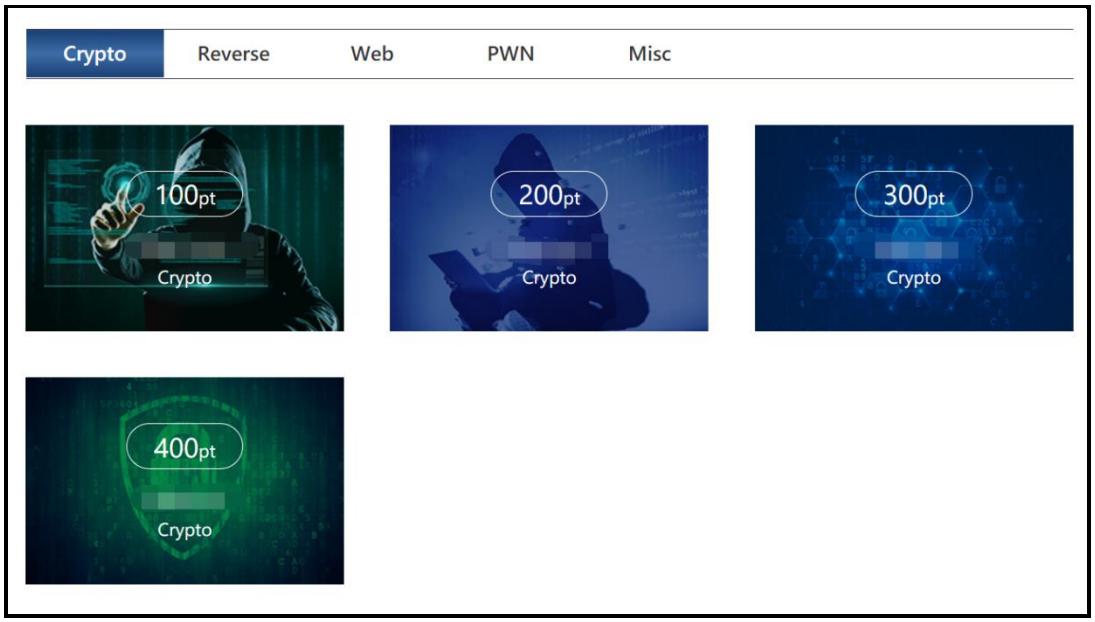

The competition adopts the traditional CTF problem solving method, with questions covering Web, Pwn, Crypto, Misc, and Reverse.

2. Competition process

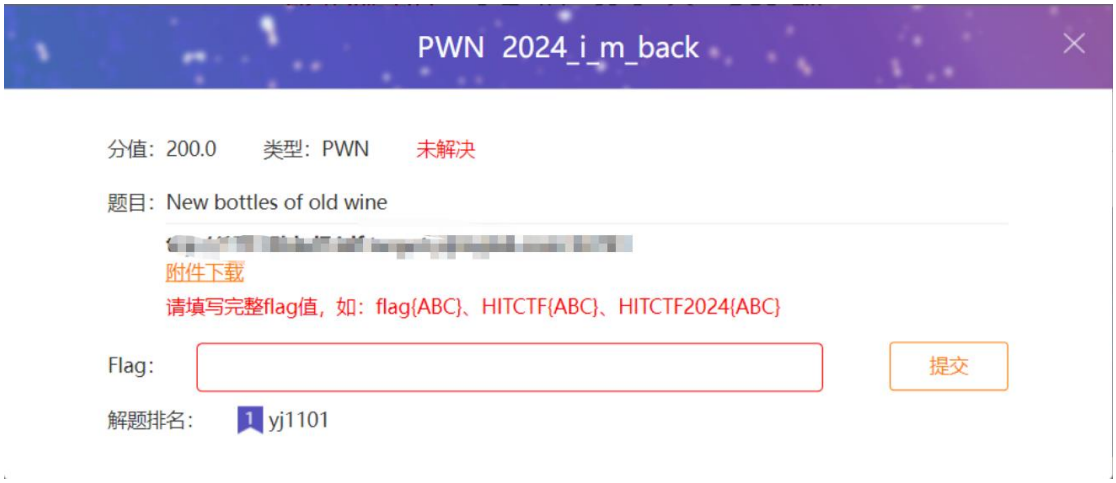

1. After the start of the competition, enter page https://ipk.yijinglab.com/hit-ctf-2024 and Click "Login" in the upper right corner, you will be able to switch between Chinese and English in the upper right corner of the login form: please be sure to choose your language here, as it will directly affect the language used in the "Competition Levels".

2. After successfully logging into your account, you will automatically enter the "Competition Levels" page, and then you can start answering the questions.

3. On the "Competition Levels" page, click on the question to bring up the details window. The process of solving the problem requires to overcome the technical challenge through offline analysis or online interaction to obtain the Flag, and the corresponding score will be given after the submission is verified to be correct.

4. The team score will be generated in real-time after the team submits a valid Flag, and will be displayed on the competition platform interface. However, the validity of the scores will be confirmed after the referee group has reviewed the team's Writeup.

3. Scoring rules

1. The competition provides multiple questions, with difficulty levels ranging from easy to medium to difficult. The scores for different levels of questions are the same.

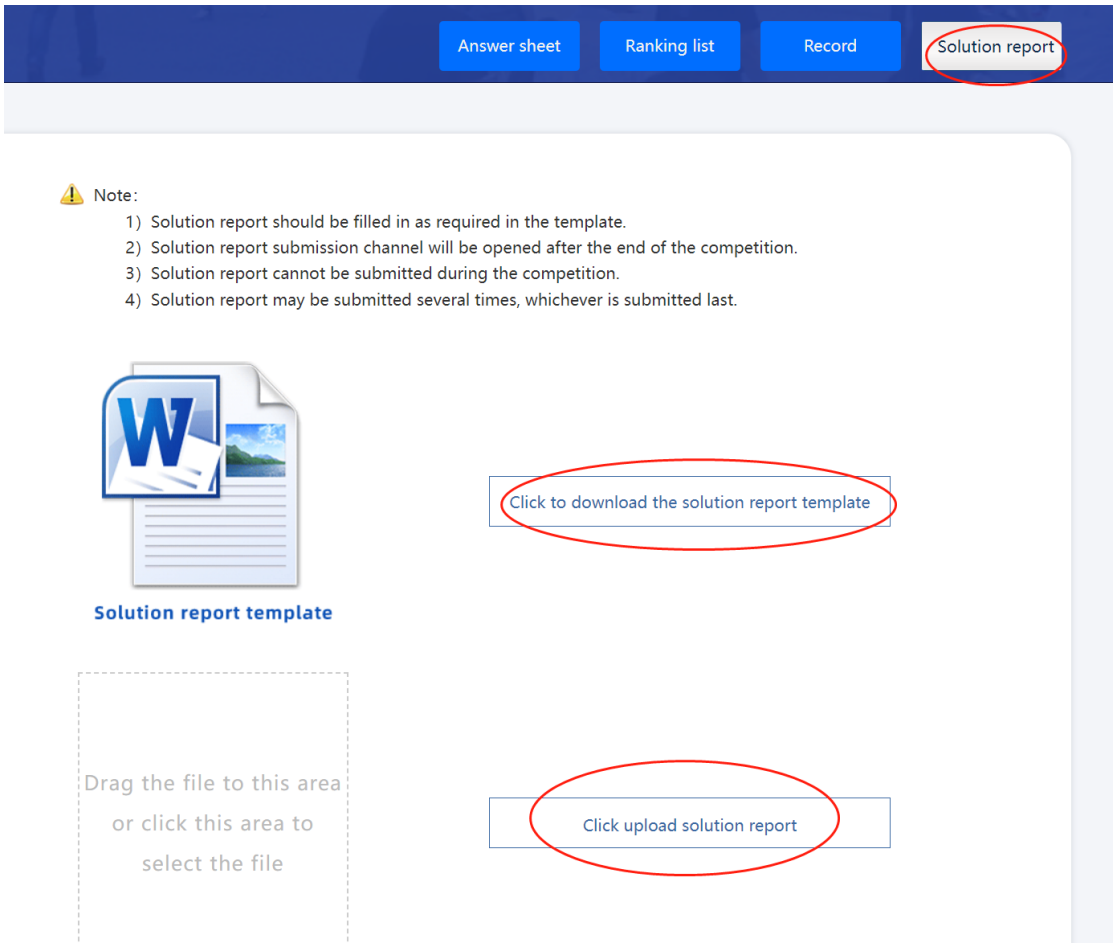

2. The answer points of the competition are in the mode of Dynamic Points + bonus scores (i.e., participants will get Dynamic Points after answering the questions correctly. For the top 3 correct answers to the question, 6%, 4% and 2% of the corresponding question scores will be given as bonus scores respectively.).

Calculation Method for Dynamic Points:

$$p = \max \begin{cases} 0.5^{\max(n-1,0)/15} \cdot p_{\max} \\ 0.25 \cdot p_{\max} \end{cases}$$

3. The final total score of the competition will be ranked from highest to lowest. In the case of equal scores, the submission time shall prevail, and those with a shorter time will be ranked higher than those with a longer time.

4. Within 24 hours after the end of the competition, each winning team must submit corresponding Writeup reports for each Flag according to the ranking of the competition, which will be reviewed by the referee group. The scores of teams that do not submit Writeup will be deemed invalid.

4. Anti-cheating rules

1. The anti-cheating system in the background of the competition will intelligently analyze the abnormal behaviors during the competition, such as IP address, token, Flag submission time, answer path, etc., and send a warning to the referee group. Meanwhile, it will record abnormal logs. After the cheating behavior is confirmed by the referee group, the team will be judged as violating the rules.

2. Violent submissions to the Flag interface or attempts to brute force Flag, as well as any other actions that affect the operation of the platform and the fairness of the competition, are considered violations.

3. DDoS, ARP and other attacks that interfere with the normal conduct of the competition are prohibited, and the sharing of any solution ideas and Flag among the participating teams is forbidden. Once found, the referee group will regard the team as violating the rules.

4. In response to the above-mentioned violations, the platform organizers and referee group have the right to take punitive actions including disqualification of teams and cancellation of team scores.
